ABSTRACT

An apparatus having: an agent; and a first test session servlet running on the agent, receiving a test description in a predetermined format from a caller, threading a first test session that invokes the agent to run the at least one subtest. The test description has at least one predefined subtest, dynamic data, and predefined test parameters. The first test session servlet receives test results from the first test session, and sends the subtest results from the at least one subtest and the dynamic data back to the caller.
